

You probably received these files on a CD. Save the Explore folder to your hard drive for the best functionality.

Explore is composed of a series of PDF portfolios. They all have interactive elements, with live links and form fields.

You will need the latest version of [Adobe Reader](#) to have the best experience with the files. If you don't have it you can still read them, but you won't be able to use the interactive features.

All the links worked when we created the files, and we've done our best to update them all.

Thanks for exploring with us!
